

Engineering Design and Prototyping

Engineering and Design Support:

At Kontek Industries our team of highly skilled engineers can assist you through the process of designing your product to meet your desired specifications. Utilizing computerized 3D models and Auto-CAD programs we can help you begin the design process or refine models/drawings that you already have. Our goal is to simply support you in reaching your price point, improve effectiveness, as well as provide the highest quality finished product. Kontek Industries has more than 150 collective years of industry experience in engineering, exotic fabrication, manufacturing and project management. Kontek Industries is trusted by many, with decades of service fabricating for the Department of Defense, Nuclear Facilities and World Class Race Teams. We will work with your team to tackle your toughest challenges and provide you components that will save you time, money and the quality to back it!

Prototyping:

Prototyping is an iterative process that takes an idea or concept and creates something tangible. Perhaps there is a product that you would like to create but have neither the means nor the ability to create it. This is where Kontek Industries comes in. We can assist you in creating a design and ultimately producing a first article product for you to test out. The next iteration is perfecting that finished product into exactly what you need it to do. Through this process we refine prototypes and designs, making changes where necessary, to fully develop your custom product. Our goal is to bring your project to life with innovative custom fabrication solutions
